Everyone is dreaming of an ideal house
BTicino knows how to make this dream
come true

LIVING

LIGHT

LIGHT TECH

LIVING, LIGHT and LIGHT TECH designed for living

LIVING, LIGHT and LIGHT TECH is the most complete system for inside and outside electric devices conceived with a simple yet engaging idea: to develop **all electrical functions with three different looks** in order to offer the best technical solution for the style and environment in which they will be installed.

LIVING

Soft and rounded shapes surrounding elegant anthracite-coloured devices.

LIGHT

Rational structures and white satin-finish switches suggest harmony and lightness.

LIGHT TECH

The metallic finish emphasizes the technological aspect of electric devices.

- all rooms of the house can be personalized with different cover plate colours
- cover plates can be changed easily at any time, for example when replacing the furniture

TECHNOLOGY and DESIGN at your system's service

Unlike the systems used a few years ago, modern electric systems do not only include switches and sockets. Today, **electronic technology** offers many useful solutions, which are not always very well known, that can make your house or office more comfortable and safe.

Light intensity adjusting dimmer

Anti-blackout emergency lamp

Protection against electric shocks

Chronothermostat for room air-conditioning

The look of the electric system consists mainly of two elements:

- the colour of the devices
- the materials and finish of the cover plates

The **cover plates**, or rather the frames surrounding the devices, are available in **more than 50 colours and materials** and have been chosen according to different furnishing styles and high quality levels.

Solid cherry essence wood

Zama metallic alloy with 24-carat gold finish

Zama metallic alloy with Tech finish

Polycarbon with gel finish

All FUNCTIONS for a modern electric system

Bticino's design philosophy is based on three main principles:

- modular concept
- miniaturization
- multifunction

All Living, Light and Light Tech devices have been developed according to these principles and will allow you to combine different electrical functions with perfectly matching and attractive results at all times.

1. LIGHT CONTROL

The ergonomics of the controls is shown in the details:
switching on is easy thanks to little knurlings on the switch and, if you wish, light can be diffused through very thin clear lens to easily spot the controls in the dark.

Quiet electronic dimmers switch lights on and off and adjust the light intensity.

Dimmers can be activated manually with pushbuttons or knobs.

The infrared (IR) switches detect people when walking by and automatically switch on the light for a certain period of time.

They are helpful in corridors and closets. IR's avoid searching for controls in the dark or when your hands are not free.

Modular concept:

all devices have been developed according to equal or multiple dimensions of a reference structure (module), thereby ensuring a perfect modularity in the light point.

2. POWER AND SIGNAL SOCKETS

A complete catalogue of sockets lets you solve all types of high quality domestic and commercial applications:

- sockets for different international standards
- TV and satellite jacks
- RJ11 telephone connectors
- RJ45 data connectors for networks
- fiber-optic connectors

General-purpose sockets house both Italian and German plugs. It would be a good idea to install one near electrically-powered appliances.

3. ENVIRONMENTAL CONDITION AND PROGRAMMING

The chronothermostat is an electronic device that adjusts the temperature in winter and summer: the consumption of the boiler is automated according to a daily and weekly cycle, thereby ensuring high comfort and remarkable energy saving.

Wall mounting

Flush mounting

Left the light on in the closet or in the stairway? The timer automatically turns off the light after a set time between 1 and 12 minutes.

Miniaturization: even electronic items have been developed in the basic module, thus matching the style and installation of traditional appliances.

All FUNCTIONS for a modern electric system

4. PROTECTION AND SAFETY

The safety of domestic environments involves many aspects contained in a catalogue full of useful functions.

ELECTRICAL SAFETY

Automatic circuit breakers together with sockets protect people even more against accidental electrical contacts.

Circuit breakers are useful, e.g. for protecting the kitchen counter.

Other appliances (called SPD) can protect television sets, stereos and computers against damages caused by lightning.

LAMPS

Lamps integrated with electric systems automatically switch on when the power goes out.

An emergency lamp is the best solution to show you the way to the distribution board in case of a black-out.

A torch is a helpful tool that can be pulled out of the wall. It automatically goes on in case of a black-out.

GAS ALARM

Protection against natural methane gas or GPL leaks is guaranteed by automatic detecting systems.

In case of leaks from appliances, they automatically cut off the gas flow (with a solenoid valve being there) and emit an audible and visual warning alarm.

Multipurpose:
modular concepts and miniaturization give rise to the possibility of choosing which functions of the system you need to activate, thereby combining them as you wish in an integrated and attractively coordinated system.

5. SOUND SYSTEM

The sound system allows you to send the signal coming from an outside source (hi-fi or CD unit) or the music of a system's built-in radio alarm clock to the rooms of a house and office.

TOUCH SCREEN colour
to control the new sound
system Hi-Fi stereo 2 wires

6. BURGLAR ALARM

BTicino offers a professional, complete and technologically advanced burglar alarm integrated with the LIVING, LIGHT and LIGHT TECH styles, complete with all the performances and capabilities of modern digital electronics.

A complete range of devices
allows you to program the
burglar alarm according to
the specific needs of the
building to be protected.

The control unit with
telephone dialling
device allows you to
send remote alarm and
signalling messages.

7. MY HOME

With **MY HOME**, BTicino offers the possibility to plan solutions regarding comfort, safety, savings, communication and control, which are inconceivable in a traditional system.

MY HOME is available in three styles:
LIVING, LIGHT e LIGHT TECH.

MY HOME

MY HOME:

For more information on this system, you may request specific documentation by visit the website www.myhome-bticino.it

Matching COLOURS and MATERIALS with the furniture

LIVING, LIGHT and LIGHT TECH offer 55 types of cover plates, all different in colour, finish and material, carefully selected to meet the **various decors** and progressive levels of choice.

The cover plate is a frame placed around an electric device.

3 LINES OF DEVICES WITH 3 DIFFERENT STYLES

LIVING has a strong propensity for being noticed on the wall. It has been conceived to complete environments with high quality furniture, both classic and modern.

LIGHT expresses many decoration styles of white: mimetic transparency of the kristall cover plate, moderate elegance of the zama and solar personality of the gel finishes.

Natural evolution of Light. The **LIGHT TECH** line has a metallic finish that matches the appliances with the cover plates, thereby resulting in an original and new style.

MATERIALS AND FINISHES FOR DIFFERENT LEVELS OF CHOICE

The cover plate catalogue is arranged according to different levels of choice (included both in the Living and Light line).

SOLID WOOD

High quality and environment-friendly selected essences of wood are processed according to the Italian traditional furniture methods.

The match between the wooden cover plate and the metal key is particularly interesting.

METAL FINISH ZAMA

The zama cover plate is suitable for electro-chemical treatments. This is where the noblest finishes of the metal begin: satin polished 24-carat gold, silver, nickel and chromium.

Zama is a zinc and aluminium metallic alloy. The Native cover plate shows the natural aspect of the speckled zama before its next treatments.

PAINTED FINISH ZAMA

This group consists of a range of colours that goes from white to anthracite and from metallized aluminium to an earth effect.

Even Plastics are high quality in LIVING and LIGHT: bakelite is a tribute to Italy's design of the past; polycarbonate is finished with a rubber effect; the plain white is finely satin-finished to get a plasterboard look.

Jelly and opal cover plates with a rubber finish, which should be felt as well as seen.

Modular concept

LIVING, LIGHT and LIGHT TECH devices are, depending on their features and their function, made in modular concepts from 1 to 4.

1 MODULE
1

2 MODULES
1+1

3 MODULES
1+1+1

4 MODULES
1+1+1+1

Most of the products are made with dimensions of 1 or 2 modules.

Only more complex electronic devices or devices with particular manufacturing needs are produced in 3 or 4 modules

As for cover plates for horizontal and vertical flush-mounting installations, both 1-module devices (two

for each housing) and 2-module devices (one for each housing) can be used.

1M + 1M

2M

2M

1M + 1M

2M

2M

Other cover plates for flush-mounting installations, having a different capacity of 3 and 7 modules (depending on the module), allow for the housing of devices in even more various combinations.

For example (see below), two 1-module switches, a 3-module programmer and a 2-module pull-out torch can be placed in a 7-module cover plate.

3M

3-module cover plate

2M + 2M

4-module cover plate

1M + 1M + 3M + 2M

7-module cover plate

Installation

FLUSH-MOUNTING
EXAMPLES OF HORIZONTAL
OR VERTICAL COMBINATIONS

- 1 - coupled square boxes.
- 2 - coupled supporting frames
- 3 - multi-modal horizontal or vertical cover plates with distance between centres 71 mm and 57 mm.

LIGHT KRISTALL cover plate

Thanks to a particular undercover plate that can be dismantled and to its realization in transparent resin, the Kristall cover plate can be personalized by the usage of tapestry if one wishes to camouflage it or by using an image or a photo if one wishes to decorate it as desired. The devices with a transparent key, that are to be matched with the KRISTALL cover plate, allow the personalization of the light point with a desired image for the most complete integration in any architectonic contest.

PORTABLE EMERGENCY LIGHT UNIT

Item	Description
L4380	Plug-in miniature emergency light unit - automatic functioning upon power failure - with recharging base - interchangeable Ni-Cd batteries
N4380	- power supply 110/127/220/230Va.c., 60Hz - 2 modules - 50 and 60 Hz
NT4380	- power supply 110/127/220/230Va.c., 60Hz - 2 modules - 50 and 60 Hz
L4380/B	Spare battery for Item L/N/NT4380

EMERGENCY LIGHT

Item	Description
L4384/1	Emergency light that illuminates automatically upon power failure - LED indicating mains status - local deactivating pushbutton - possible distant exclusion through switch - replaceable rechargeable Ni-Cd battery - 1 hour duration - power supply 230Va.c., 60Hz - 1W lamp - 4 modules - 50 and 60 Hz
L4384/3	As above - 3 hour duration
L4386/1	As above - 1 hour duration - 1.3W
L4386/1/127	lamp - 6 modules, 50 L4386/1/127 and 60Hz for model 127V
L4386/3	As above - 3 hour duration, 50 and 60Hz for model 127V
L4386/3/127	60Hz for model 127V
L4386/1L	As above - with permanent illumination - for rooms that need light for 24h a day - 1 hour duration
L4386/3L	As above - 3 hour duration
L4784/1	Spare battery for Item L4384/1
L4784/3	Spare battery for Item L4384/3

4-ZONE CONTROL UNIT

Item	Description
L4600/4	Miniature control unit - it allows the connection/disconnection of the system, the control of 4 zones, the programming of up to 30 remote controls, the carrying out of system tests and the alarms management with relevant signalling and memory
N4600/4	
NT4600/4	

SINGLE ZONE CONTROL UNIT

Item	Description
L4600/1	Miniature control unit - it allows the connection/disconnection of the system, the control of 1 zone, the programming of up to 30 remote controls, the carrying out of system tests and the alarms management with relevant signalling and memory
N4600/1	
NT4600/1	

ZONE SUBDIVIDER 1 TO 4

Item	Description
L4603/4	Receiver for connecting/ disconnecting the system by means of remote control - pushbuttons for controlling 4 zones - zones and system status signalling through LED - it can be coupled with the single zone control unit in order to extend the system from 1 to 4 zones
N4603/4	
NT4603/4	
L4607/4	As above - with transponder item 3530, item 3530S and item 3540
N4607/4	
NT4607/4	

ZONE EXPANDER 5 TO 8

Item	Description
L4603/8	Module for expanding the zones that can be subdivided - control pushbuttons of zones 5 to 8 - zones status signalling through LED - it can be coupled with 4 zone or single zone control unit + zone expander 1 to 4 - for expanding the system up to 8 zones
N4603/8	
NT4603/8	

ELECTRONIC CONNECTING KEY

Item	Description
L4604	Receiver for the system connection/disconnection through remote control - zones status signalling through LED - possibility to set the activation of fixed zones - auxiliary channel available for the activation of access controls (door locks)
N4604	
NT4604

CONTROL UNIT

Item	Description
3500N	unit with PSTN integrated telephone dialing device - it enables you to manually switch the system on and off, with transponder and IR remote control; bi-directional communication between the user, the burglar alarm system and the automation
3500GSM	unit as above but with PSTN and GSM integrated telephone dialing device. GSM antenna is supplied

TRANSPONDER

Item	Description
3530	portable badge - when brought close to the transponder reader it activates it allowing the transfer of the signal generated on the BUS - does not require batteries for power - can be automatically coded by means of the transponder reader
3530S	as above - thin
3540	as above - key-holder

IR REMOTE CONTROL

Item	Description
4050	portable infrared remote control to switch the system on or off - can be coded automatically via the unit - powered with two lithium batteries (supplied) - life: 50000 operations

L4614	Relay activating module with multiple configuration - C-NO-NC contacts,
N4614	24Vd.c. 0.4A cosφ 0.4
NT4614	

AUXILIARY CHANNEL INTERFACE

Item	Description
L4615	Interface module for NO or NC
N4615	auxiliary contacts - optoinsulated input
NT4615	5-12Va.c./d.c.

RADIO EXPANDER

Item	Description
L4620	Radio tuner module - to be used for
N4620	remote assistance to people in
NT4620	difficulties - to be coupled with
	remote control Item L4621 - it can be
	used with radio detectors

PASSIVE IR DETECTORS

Item	Description
L4610	Volumetric passive IR movement
N4610	detector - alarm signalling LED with
NT4610	memory - range 8 meters, angle of
	detection 105°, 14 beams on 3 levels
	- pre-alarm auxiliary channel
L4611	Movement detector as above - angle
N4611	of detection can be reduced from 105°
NT4611	down to 0° - swinging lens on 2 axes

DOUBLE-TECHNOLOGY DETECTORS

Item	Description
L4613	Double-technology volumetric
N4613	presence sensor made up of two
NT4613	detectors: an infrared detector to trace
	warm bodies (IR) and a microwave
	detector to trace movement (MW).
	The alarm is activated only when both
	tracing technologies are activated.

CONTACT INTERFACE

Item	Description
L4612	NC contact interface module - possibi-
N4612	lity of connecting a balanced/
NT4612	non-balanced contact protection line
L4612/12	Interface module for shutters protec-
N4612/12	ting cord detector - it can also be
NT4612/12	connected with NC/NO and glass
	breaking detectors Item 3516
F482	NC electromagnetic contact interface
	module - can connect 2 balanced and
	unbalanced contact protection lines
	- alarm indication LED with operation
	memory

ELECTROMAGNETIC CONTACT

Item	Description
3510	NC electromagnetic contact interface detectors and protection line - version for flush mounting
3510M	sensor as above - brass, high mechanical resistance - used for non-ferromagnetic window and door frames with a low section profile
3510PB	sensor as above - brass, high mechanical resistance - used for all types of window and door frames and armored doors
3511	sensor as above - version for visible mounting
3512	sensor as above - die-cast aluminum for swing door or sliding door installations. For floor installations
3513	sensor as above - version for visible mounting on metal surfaces (main doors)

DETECTOR FOR ROLLING SHUTTERS

Item	Description
3514	detector to protect rolling shutters or similar winding shutters - can also manage an opening magnet (supplied) to check the perimeter

PIEZOELECTRIC DETECTOR

Item	Description
3516	piezoelectric window-breaking detector. Installation by means of double-sided adhesive tape, supplied

INFRARED BARRIERS

Articolo	Descrizione
3518/50	active infrared barriers, to protect windows and doors. The device is made up of 2 columns, one acts as a TRANSMITTER (TX), the other as a RECEIVER (RX). When several IR beams are broken the alarm is immediately triggered - length 0.5 meters
3518	as above - length 1 meter
3518/150	as above - length 1.5 meters

IR MINI DETECTORS

Item	Description
N4640	Passive IR movement detector - detection range 8 meters, opening 105°, 14 beams on 3 levels - wall, sloping and angle-mounting

RADIO REMOTE CONTROL

Radio remote control for remote assistance

Item	Description
L4621	Radio remote control for sending remote assistance alarms - it can be coded automatically through radiotuner Item L4620, N4620 and L4610 NT4620 - power supply through 2 Lithium batteries (supplied) - duration: two years

POWER SUPPLIES

Item	Description
E46ADCN	Power supply for burglar-alarm system to be used with external siren Item 4072L - input 230V a.c. output 27V d.c. SELV - maximum absorbed current 450mA - 8 DIN modules
E46ADCN/127	Power supply as above - input 127V a.c.
E47ADCN	Power supply as above to be used with optional external siren Item 4072A - 8-module version for fastening on DIN rail for wall-mounted containers Item F115/8A - made for the connection of 12V 7/12/24Ah battery for self-supply of the whole system
E48	Basic unit for supplying MY HOME systems with several installations (Burglar alarm, Automation, etc.) to be combined with the accessory modules item E48A1 and item E48A2 - Power supply 110-230V a.c., output 29-35V c.c. 1.2A, absorbed power 131VA cosφ0.99 - 10 DIN modules
E48A1	Accessory module for supplying 27V d.c. 1.2A power to the Burglar alarm, Automation and Temperature control systems - possible to connect 12V 7.2-24Ah back-up battery - Size: 4 DIN modules - Pd=7W
E48A2	Accessory module for supplying 27V d.c. 1.2A power to the Burglar alarm, Automation, Temperature control and 2 wire Video Door Entry systems - possible to connect 12V 7.2-24Ah back-up battery - Size: 4 DIN modules - Pd=4.6W

SIGNAL REPEATER

Item	Description
L4520	Signal repeater for gas detectors - optical/audible alarm - relay output with 1 switching contact 6A resistive 2A inductive - 2 modules
N4520	
NT4520	

TRANSFORMER

Item	Description
L4541	Safety transformer - input 230Va.c. - 50/60Hz - output 12Va.c. - 4VA - 2 modules
N4541	
NT4541	

WALL-MOUNTING DETECTOR

Wall-mounting methane gas detector

Item	Description
N719	Methane gas detector with optical and audible alarm (85dB) - internal self-diagnosis - internal relay 6A cosφ 1 - solenoid valve control with manual reset 2 to 200 VA (12 to 230V a.c.) - power supply through sheathed or single pole cables in trunking at sight or flush pipes

DIN TRANSFORMER

Item	Description
F91/12E	Safety transformer - input 230Va.c. - 50/60Hz - output 12Va.c. - 6VA - housing for DIN rail - 3 modules

SOLENOID VALVE

Item	Description
L4525/12N0	NO gas solenoid valve - manual reset - power supply 12V 50Hz - power 3VA - consumption in non-working condition: 0 - max. pressure 500 mbar - IP65 protection degree - working temperature -15+60°C - 3/4 " threaded caps and 1/2 " reductions supplied

Wiring accessories Floor boxes

WIRING ACCESSORIES - FLOOR BOXES

These new floor boxes were planned for being equipped with 1 or 2 module devices of the wiring accessories series Living International, Light and Light Tech. Thanks to the cover with automatic shutting and hinge made of caoutchouc, they allow a very good protection degree (IP24-7). There are two finishes that can be stepped on: inox steel and brass, both of them particularly polished and which can carry a max. split up weight of 500kg. By means of two specific boxes, the installation can be made in cement floors (with a min. depth of 50mm) or in raised technical floors (with a min. depth of 60mm).

Dimensions:

- ext. diameter 100 mm
- protrusion from the floor max. 4.5 mm

Item	Description
150560AC	2 module column, inox
1505600T	2 module column, brass
150560SB	Box for cement
150560S	Underfloor flush-mounting box
150560F	Cutter diam. 86mm

L4741/230V e /127	L4741/230V e /127	L4741/230V e /127

PREWIRED LAMP

This new Item allows to quickly and easily light up switches or pushbuttons with locating lamps.

In fact, for the mechanical coupling and the electrical connection, it is enough to fit the lamp into the special socket in the back of the control device.

For other functions different from the locating one, or for 12V or 24V input, the control devices can be lighted with the lamps Item No. 11250L, 11250LV, 11251L, 11252L.

LAMP INSTALLATION

LUMINOUS CONTROLS

The following diagrams allow for the implementation of light points that can be identified with locating lamps or pilot lamps; they adapt to basic control devices (switches, two-way switches, intermediate switches) of all BTicino domestic lines (LIVING, LIGHT and LIGHT TECH).

PILOT LAMP

For indicating the operation status of users' equipment not visible from the control point.

LOCALIZATION LAMP

For identifying control pushbuttons in the dark.

Dimmer

KNOB DIMMER

Device	LIVING	LIGHT	LIGHT TECH
A	L4401	N4401	NT4401

This dimmer can control ferromagnetic transformers and incandescent lamps (power between 60W and 500W) from one or more points.

Pressing the centre pushbutton will activate the load thus setting it to the level of the last adjustment that was made. Pressing it again will deactivate it. The fine-adjustment of the levels occurs using the knob. When switching on, the devices enable the load in order to gradually reach the set level of brightness to avoid dazzling phenomena (soft-start); switching off also occurs gradually (soft-stop).

The dimmer is designed using new technology which ensures compliance with the standards on the emission of electromagnetic disturbances without the use of filter coils, hence ensuring equipment noiselessness.

An inbuilt fuse type T2,5H250V selfprotects dimmers against short circuits. Using dimmers powered by uninterrupted power supplies or by a generator set may cause malfunction.

Installation notes

For proper operation of all dimmers, follow the instructions below during installation:

- do not use two or more dimmers together in the same box
- do not install in boxes where there are thermostats

Device	LIVING	LIGHT	LIGHT TECH
A	L4402	N4402	NT4402
B	L4406	N4406	NT4406
C	L4581	N4581	NT4581
D	L4583	N4583	NT4583

Knob dimmers allow for resistive load adjustment. They can be supplied with or without a built-in two-way switch.

Devices "B" and "C" must be protected with a fuse type T2,5H 250V, thereby making it possible to adjust the load from one point and switching on and off from different points through two-way switches or external switches. Instead, device "A" makes it possible to adjust the load and to switch it on and off through the built-in two-way switch; it can therefore be replaced with a normal switch or two-way switch without modifying the system. It has been designed with a new technology which does not require the use of the filter coil, thereby making it absolutely noiseless but, at the same time, in compliance with the standards on the emission of electromagnetic disturbances.

Technical features

- power supply: 230V a.c. \pm 10%
- type of load: resistive or ferromagnetic transformer
- power: (see dimmer page on catalogue section)

Wiring diagram

Example of use remote pushbutton with locating lamps

Technical features

- power supply: "A" and "B"=230V a.c. "A"=50Hz and 60Hz "B"=50Hz "C" and "D"= 110-127-230V a.c. 50 and 60Hz
- type of load: resistive (incandescent lamps only)
- power: (see dimmer page on catalogue section)

Wiring diagram - device "A"

Dimmer

PUSHBUTTON DIMMER AND PUSH-PUSH

	LIVING	LIGHT	LIGHT TECH
A	L4413	N4413	NT4413
B	L4582	N4582	NT4582

These dimmers can control resistive loads and ferromagnetic transformers (power between 60VA and 500VA) from one or more points. They are designed with a new technology which ensures compliance with the standards on the emission of electromagnetic disturbances without the use of filter coils. This feature allows the devices to be totally noiseless. The quick pressure of the knob, or one of the pushbuttons connected externally, activates the load and sets it according to the level of the last adjustment that was made; a second quick pressure deactivates it. When switching on, the devices enable the load in order to gradually reach the set level of brightness to avoid dazzling phenomena (soft-start); switching off also occurs gradually (soft-stop).

An inbuilt fuse type T2,5H250V selfprotects dimmers against short circuits. Using dimmers powered by uninterrupted power supplies or by a generator set may cause malfunction.

Installation notes

For proper operation of all dimmers, follow the instructions below during installation:

- do not use two or more dimmers together in the same box
- do not install in boxes where there are thermostats

DIMMER FOR ELECTRONIC TRANSFORMERS

	LIVING	LIGHT	LIGHT TECH
A	L4407	N4407	NT4407
B	L4407/127	N4407/127	

This dimmer can control electronic transformers for powering up low voltage quartz-iodine lamps (with power between 60VA e 250VA, 50 to 250VA for L/N4407/127). It is designed with a new technology which ensures compliance with the standards on the emission of electromagnetic disturbances without the use of filter coils. This feature allows the device to be totally noiseless. The quick pressure of the local pushbutton, or one of the pushbuttons that can be connected externally, activates the load and sets it according to the level of the last adjustment that was made; a second quick pressure deactivates it. An extended pressure of the pushbutton makes it possible to adjust the min-max / max-min load. When switching on, the device enables the load to gradually reach the set level of brightness in order to avoid dazzling phenomena (soft-start); switching off also occurs gradually (soft-stop).

An inbuilt fuse type T2,6H250V selfprotects dimmers against short circuits. Using a dimmer powered by uninterrupted power supplies or by a generator set may cause malfunction.

Installation notes

For proper operation of all dimmers, follow the instructions below during installation:

- do not use two or more dimmers together in the same box
- do not install in boxes where there are thermostats item L/N/NT4441 and item L/N/NT4442.

Technical features

- power supply: "A"=230Va.c. 50Hz, "B"=110-127-230V a.c. 50 and 60 Hz
- type of load: resistive or ferromagnetic transformer
- power: (see dimmer page on catalogue section)

Wiring diagrams

Technical features

- power supply: "A" 230Va.c. 50Hz - "B" 110-127V a.c. 50Hz
- type of load: for electronic transformers
- power: "A" 60 to 250 VA - "B" 50 to 250VA

Wiring diagram

(1) electronic transformers

SLAVE DIMMER

LIVING	LIGHT	LIGHT TECH
L4416	N4416	NT4416

This device can regulate loads only if it is controlled by another dimmer, to which must be properly combined. In this way it is possible to obtain an increase in the power controlled by the main dimmer, that has the "master" function. One or maximum two "slave" can be connected to the following dimmers: L/N/NT4413. It is not possible to act directly on the slave dimmer.

Technical features

- power supply: 230Va.c. 50Hz
- type of load: resistive or ferromagnetic transformer
- power: 60 to 500 VA

Wiring diagram

(1) L/N/NT4403 - 4413

(2) L/N/NT4416

ELECTRONIC TRANSFORMERS

Device	LIVING	LIGHT	LIGHT TECH
A	L4405/60	L4405/60	L4405/60
B	L4405/105	L4405/105	L4405/105

Electronic transformers can power up low voltage quartz-iodine lamps with power between 20W and 60W (L4405/60) or between 35W and 105W (L4405/105) and can be adjusted from the dimmer (L/N/NT4407). They have a terminal set up for connecting up to three 20W lamps (.../60) or three 35W lamps (.../105) and can also be installed inside furniture.

Technical features

- power supply: 230Va.c. 50Hz
- output voltage: 12V
- type of load: resistive
- power of device "A": 10 to 60W
- power of device "B": 35 to 105W
- operating temperature: 0 to 50 °C
- max conductor size: 2.5 mm²

Wiring diagram

CODED KEYS

LIVING
L4531
L4532

These keypad controls Item L4531 - L4532 allow the control of electric devices through a 4-digit secret code; they find application in public places, offices, hospitals, schools where activation of electric devices control is to be performed only by its staff. The same devices can also be used to control electric locks, so to make a first-level control of the accesses.

Technical data

- power supply: 230V 50/60Hz
- controllable loads:
 - 250Va.c. - 6A - $\cos\varphi=1$; 35V d.c. 8A
- the device can control higher electrical power by means of an external relay.
- operating temperature: 0-40 °C
- max conductor size: 2.5 mm²
- memory time of codes in case of power supply failure: 10 years

Wiring diagram

Electronic control devices

IR REMOTE CONTROL SYSTEM

LIVING	LIGHT	LIGHT TECH
L4425 and L4425/127	N4425 and N4425/127	NT4425
L4426 and L4426/127	N4426 and N4426/127	NT4426
4482/7	4482/7	4482/7
4482/16	4482/16	4482/16

The infrared remote control system lets you switch on and off or adjust electric loads or activate drapery, blinds, etc... from remote control points. All this is electrically carried out in a safe manner since there are no electrical connections between the control point (remote control) and the user (load). This feature makes it possible to install this system in places where high safety is required, places where there are disabled persons and wherever it is impossible to physically connect a control point and a controlled device.

The system includes:

- a 7-channel or 16-channel remote control
- 1-channel receivers
- 2-channel receivers
- dimmer receiver

Features of remote controls

Remote controls can be of two types: with 7 or 8 pushbuttons. The first version controls up to 7 receivers in the same room and it is suitable for domestic environments. The second version has 16 channels: the first 8 are directly controlled with the 8 pushbuttons (flicking the selector will changeover to the next 8 channels). The latter model is normally used in service industry applications. To make their use easier, it is possible to apply labels with specific symbols next to the pushbuttons. These symbols should be used to remember the functions of each channel. 1.5V batteries - type AA - are housed in the bottom part.

Features of receivers

Receivers are available in the following versions: version with dimmer or with 1 or 2 channels, relays and built-in local control pushbuttons for controlling single or double loads. By using the microswitches located under the removable front cover, it is possible to select the receiving channel and the cyclic or monostable relay operation mode (switch or pushbutton function).

Technical features L/N/NT 4425 and L/N 4425/127 1 CHANNEL RECEIVER

- power supply: 230Va.c. 50/60Hz (127V a.c. 50/60 Hz item L/N 4425/127)
- controllable loads:
 - 6A resistive loads or incandescent lamps
 - 2A $\cos\phi$ 0.5 fluorescent lamps and inductive loads
- relay: cyclic and monostable
- receiver: 1 channel

Technical features L/N/NT 4426 L/N 4426/127 2 CHANNEL RECEIVER

- power supply: 230Va.c. 50/60Hz (127V a.c. 50/60 Hz art. L/N 4426/127)
- controllable loads:
 - 4A resistive loads or incandescent lamps
 - 750W gear motors
- relays: no. 2 - interlocked
- receiver: 2 channels

Wiring diagram L/N/NT 4425

(1) L/N/NT4413 - 4432 - 4461

Wiring diagram L/N/NT 4426

PASSIVE IR SWITCH

Device	LIVING	LIGHT	LIGHT TECH
A	L4431	N4431	NT4431
B	L4432	N4432	NT4432
C	L4432/127	N4432/127	—

The passive IR switch opens up new prospects in the field of automatic mechanisms, allowing to automatically switch on devices as passers-by approach (for example, light turns on without touching any switch or pushbutton). It is possible to adjust the device sensitivity threshold according to the room natural lighting and to adjust the end-of-operation delay after last movement has been detected, to optimise performance.

The detection range can be widened by installing several devices at different places, with outputs connected in parallel.

Volumetric coverage is achieved with 3 levels of rays A, B and C with plus-2, minus-6 and minus-30 degrees orientation relative to the installation axis, and reaches 4 meters.

Covering fields

Technical features – device “A”

- power supply: 230Va.c. 50Hz
- controllable loads:
 - 2A resistive load, incandescent lamps and ferromagnetic transformer
 - 2A $\cos\phi$ 0.5 inductive load
- adjustment of time for switching on: from 30 seconds to 10 minutes
- twilight adjustment: from 5 lux to dark.

Wiring diagram

Technical features – device “B”

Power supply: 230V a.c. 50/60Hz

- controllable loads:
 - 2A inductive load and fluorescent lamp
 - 6A resistive load, incandescent lamps and ferromagnetic transformer
- adjustment of time for switching on: from 30 seconds to 10 minutes
- twilight adjustment: from 5 lux to dark
- controllable with external pushbuttons
- selector 0-A-1 (manual operation with external pushbuttons, automatic and external pushbuttons always ON).

Technical features – device “C”

Power supply: 110-127V a.c. 50 and 60Hz

- controllable loads:
 - 2A inductive load and fluorescent lamp
 - 6A resistive load, incandescent lamps and ferromagnetic transformer
- adjustment of time for switching on: from 30 seconds to 10 minutes
- twilight adjustment: from 5 lux to dark
- controllable with external pushbuttons
- selector 0-A-1 (manual operation with external pushbuttons, automatic and external pushbuttons always ON).

Socket outlets

SAFETY SOCKETS

LIVING

All standard sockets

LIGHT

LIGHT TECH

The (totally separated) tulip safety sockets can be accessed only with a special plug that closes the contact when it is completely in. The contact is guaranteed by the pressure of special spiral springs. Plugs with a different capacity cannot be interchanged, thus it is possible to substantially separate several circuits.

More significant testing conditions

- testing voltage: gradual 2000V 50Hz per minute
- insulation resistance tested at 500V: > 5M Ω.
- breaking test: 100 plug connection/disconnection operations at 275V a.c. $\cos\phi$ 0.6 - 12.5A (for 10A plugs), 20A (for 16A plugs).
- extended operational test: 10.000 10000 plug connection/disconnection operations at 250V a.c. $\cos\phi$ 0.6 with rated current.

Rated features and classification (according to Standards CEI 23-16/VII-1971 and 23-5/I-1972) of plug-in sockets for domestic uses and the like.

Type of DEVICE	No. of poles	Coupling mode	Reference abbreviation	Rated current	Type of current	Rated voltage	Type of device	Terminal position	Maximum conductor size

A	L4177	N4177	NT4177
B	L4177/127	N4177/127	NT4177/127

The transformer is connected to power line only when the plug is inserted by means of a pushbutton (1) to avoid useless loss, heating and humming, and is protected by a thermal effect device which automatically disconnects the primary when load exceeds 20VA.

Reconnection is automatic after the protective device has cooled down. The shaver socket is typically installed in hotels, pensions and similar, for customer's safety and to avoid illegal use of the bathroom's socket.

Technical features "A"

- 20VA transformer:
- primary 230V a.c. \pm 10% 50Hz
 - two 115V or 230V a.c. secondaries that can be selected with a commutator
 - max conductor size: 2.5 mm²

Technical features "B"

- 20VA transformer:
- primary 127V a.c. 50 and 60 Hz
 - two 127V or 230V a.c. secondaries that can be selected with a commutator
 - max conductor size: 2.5 mm²

TIMER

	LIVING	LIGHT	LIGHT TECH
A	L4461	N4461	NT4461
B	L4461/127	N4461/127	NT4461

This timer, which is delayed when de-energized, allows you to have traditional circuits for stairway lights, air extractor controls, etc. It can be controlled with pushbuttons or switches. The delay time count when turned off starts when the pushbutton/switch contact is opened.

Common technical features

- power supply: "A" 230V a.c. $\pm 10\%$ 50/60Hz "B" 127V a.c. $\pm 10\%$ 50 and 60Hz
- remote control with pushbuttons or directly on the device with built-in pushbutton
- contact signal closed with pilot lamp (yellow LED)
- max conductor size 2x2.5mm²
- time delay setting: continuously from 1 to 12 minutes
- overall size: 2 modules
- controllable loads:
 - 6A resistive load and ferromagnetic transformer
 - 2A incandescent, fluorescent lamp and inductive load

ROOM THERMOSTATS

Device	LIVING	LIGHT	LIGHT TECH
A	L4441	N4441	NT4441
B	L4442	N4442	NT4442
C	L4442/127	N4442/127	—

These thermostats control the room temperature through an electronic detector that operates an output relay.

The following parts are on the front part of the devices:

- knob for setting the selected temperature
- LED for indicating the operation status
- commutator for selecting "summer/winter"

Common technical features – devices "A", "B" and "C"

- power supply "A" e "B" 230V a.c. $\pm 10\%$ 50/60Hz 0,6W - "C" 127V a.c. $\pm 10\%$ 50 and 60Hz
- output contacts 2A 250V a.c.
- room temperature setting range: 5 to 30°C
- recommended installation height from floor: 1.5m (away from heat sources and draughts)
- do not install in boxes where there are dimmers
- max conductor size = 2x2.5mm²
- overall size: 2 modules

Technical features – device "A"

- for heating and air-conditioning systems (boilers, fan-coil units, air-conditioners, fan heaters)
- set up for external "summer/winter" commutator
- switched output contact

Technical features – device "B" and "C"

- for heating and air-conditioning systems (boilers, fan-coil units, air-conditioners, fan heaters)
- built-in "summer/winter" commutator
- output contact NO

Wiring diagrams

- 1 - The lamp turns on when the pushbutton is pressed and stay on for the set time.
- 2 - The lamp and motor turn on when closing the switch. On opening of the switch, the lamp goes off while the motor keeps running for the set time.

Wiring diagram – device "A"

Wiring diagram – device "B" and "C"

ELECTRONIC CHRONOTHERMOSTAT 230V A.C.

	LIVING	LIGHT	LIGHT TECH
A	L4448	N4448	NT4448
B	L4448/127	N4448/127	-

The electronic chronothermostat, perfectly modular with the other devices, takes up 3 modules and can be replaced with any type of pre-existing timer or chronothermostat provided that a power line voltage is available in the installation area. The output on the switched contacts pilot-operated by a relay is totally independent and separated from the programming and adjustment electronic circuit.

Keys

- + forward movement (continuous pressure = fast forward movement)
- backward movement (continuous pressure = fast backward movement)
- M memory
- P programming setup
- S program selection
- P+M device reset

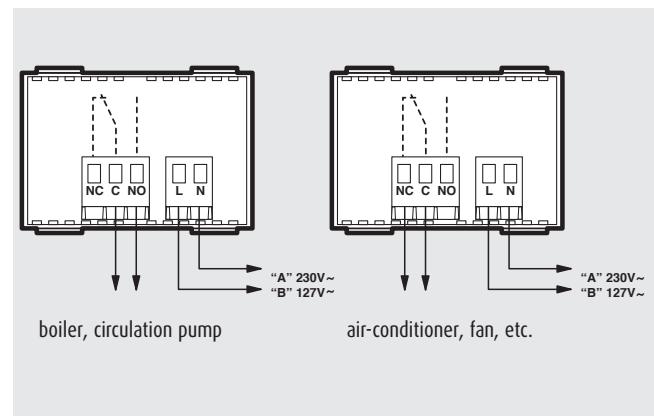

Indexes

- 1 day of the week
- 2 value of set temperature
- 3 value of room temperature
- 4 programming in progress
- 5 copying of the programming
- 6 type of program (MAN, P1, P2, P3)
- 7 time setting in progress (hour, minutes, day)
- 8 output operation status
- 9 hour - minute
- 10 programming phase (ON1, OFF, ON2, OFF2, etc..)
- 11 antifreeze function

Technical data

- 4 types of programs: MAN, P1, P2, P3
- manual control
- possibility to program two different temperatures
- permanent indication on the liquid cristal display of: the time, day of the week, room temperature, type of program selected and device output operation status
- back-up battery for saving data: 30 day battery life
- minimum time between a programmed operation and the next: 1 minute
- temperature values that can be set: 7 to 35°C (with a one-degree minimum interval)
- operating voltage: "A" 230V a.c. $\pm 10\%$ 50Hz - "B" 127/110V a.c. $\pm 10\%$ 50/60Hz
- voltageless switched contact: 5A $\cos\phi$ 1 - 2A $\cos\phi$ 0.5
- max conductor size: 2x2.5mm² for heating and air-conditioning systems (boilers, fan-coil units, air-conditioners, fan heaters)
- set up for external "summer/winter" commutator.

Control

3V BATTERY-OPERATED ELECTRONIC CHRONOTHERMOSTAT

LIVING	LIGHT	LIGHT TECH
L4449	N4449	N4449

The chronothermostat, which can be used for heating and air-conditioning systems, makes it possible – through several programming possibilities – to adjust the temperature at any time of the day and in a differentiated manner, every day of the week. It is possible to choose how to use a standard program (already stored but can be changed according to the specific needs of the user) or to create a new one with a simple

Technical data

- minimum time between a programmed operation and the next: 15 minutes
- max no. of temperature changes in a day: 8 (4 ON/OFF cycles)
- temperature interval shown on the display: 5°C to 45°C
- temperature values that can be set: 7°C to 35°C (with a 0.5°C minimum interval)
- accuracy of controlled temperature: $\pm 0.5^\circ\text{C}$
- power supply: two 1.5V alkaline batteries type LR67AA
- battery life, no longer than two years
- charge back-up: 2 minutes for replacing the batteries
- flush-mounting or wall-mounting installation with boxes and supporting frames for series LIVING INTERNATIONAL, LIGHT, LIGHT TECH
- voltageless output contact rate: 1A
- possibility of connecting an external gauge for the temperature (NTC R 25°C = 100k Ω - max connection length, 5 metres)
- possibility of remote controlling the chronothermostat (for example, with a phone call through the PBX switchboard).
- max conductor size: 2.5 mm²

Recurrent function keys

- P selecting operation modes
- T temporary display of the temperature values or of the current time
- + - adjustment of temperature and time parameters:
+ forward movement – backward movement (the extended pressure on the pushbutton enables the fast forward movement)

programming procedure. A large display shows you at all times the program settings, the status of the system and the temperature of the room. The chronothermostat has a base for making electrical connections to the system (which can be installed on the supporting frames, for series LIVING INTERNATIONAL, LIGHT and LIGHT TECH) and a removable part including its controls and a large display.

Numerical display

Numerical display
Constantly displays the room temperature.
Use the T key to cyclically display
TEMP3-TEMP2-TEMP1, TIME and ANTIFREEZE TEMPERATURE.
When programming, it displays different parameters to be set.

Various indications

- TIME** – procedure for setting/displaying the time and current day
- +1h** – daylight saving time
- battery symbol – dead batteries signal
- copying of the daily programming.

Wiring diagram

to the loads to be checked

connection external gauge (NTC R 25°C = 100k Ω max length 5 metres)

remote activation
closed contact = manual program with antifreeze mode
open contact = automatic program (last selected)

WALL MOUNTING CHRONOTHERMOSTAT - 3 V BATTERIES

LIVING	LIGHT	LIGHT TECH
L4450	N4450	NT4450

The L/N/NT4450 chronothermostat measures the room temperature and adjusts the heating or air-conditioning system it is connected to. The operation mode can be chosen between one of the preset modes or customized modes, depending on your needs. The large display shows the temperature profile – in other words the relation between the time and the temperatures to be maintained -, the temperature measured, the relative humidity, the calculated perceived temperature, the time and the day of the week. The chronothermostat is powered with batteries. Settings and data are stored in a non-volatile RAM which preserves them even when the batteries are flat. The L/N/NT4450 chronothermostat is set for being connected with a separate temperature.

Technical data

Power supply	2 alkaline AA 1.5 V batteries
Battery life	More than 1 year
Outputs	1 single-pole relay voltage 250 Vc.a. capacity 5(3) A
Inputs	Separate temperature probe NTC, R25°C=10kΩ, BETA 3435 Max. length of connection: 10 metres
Electrical connections	Screw terminals
Insulation	Double \square
Protection degree	IP20 (normal pollution)
Storage of settings	Non-volatile storage.
Microdisconnection	1BU
Software	Class A
Temperature setting range	2 °C - 40 °C
Antifreeze temperature setting range	2 °C - 7 °C
Maximum temperature	T45
Local signalling	LCD Display
Local controls	7 keys 3 rotating selector switches
Dimensions (L x A x P)	155 X 91 X 20
Reference temperature gradient	4 K/h
Display of relative humidity	20% - 90%

The L/N/NT4450 Chronothermostat device is fully compliant with the CEI EN 60730-1 standards and with its secondary parts.

Control

WIRING DIAGRAM

Connecting the heating and cooling system

Connect the two wires of the heating and cooling system to screw terminals 1 and 2, as shown in the picture. It is possible to use flexible conductors (max section 2.5 mm²) with the terminals. Terminal 4 is free and can be used for signalling or other purposes.

Please note: Make sure that the relay load does not exceed the values shown in the «Technical features».

Connecting the separate temperature probe

Connect the two wires of the separate temperature probe to screw terminals A and B, as shown in the picture.

If you want to control both the heating and cooling system, set up a two-way switch for selecting Summer/Winter, as shown in the picture:

When the season changes, set the two-way switch to the required position and switch over to the Summer/Winter by pressing the proper key on the chronothermostat.

PROGRAMMER

	LIVING	LIGHT	LIGHT TECH
A	L4466	N4466	NT4466
B	L4466/127	N4466/127	—

This daily/weekly cycle programmer enables the automatic connection or disconnection, with a maximum absorption of 8A, according to a fixed time set by a user.

Technical data

- daily/weekly cycle with 4 daily connections and disconnections
- operating voltage: "A" 230V a.c. $\pm 10\%$ 50/60 Hz
"B" 110/127V a.c. $\pm 10\%$ 50/60 Hz
- voltageless switched contact
- controllable loads:
 - 2A inductive load
 - 4A fluorescent lamps
 - 6A incandescent lamp and ferromagnetic transformers
 - 8A resistive load
- minimum time between one operation and the next: 1 minute
- charge back-up: 30 days
- permanent indication on the liquid cristal display of: the time, day of the week and connected/disconnected load
- display, if required, of the program setting
- manual control
- max conductor size: 2.5 mm²

Wiring diagram "A" and "B"

ALARM CLOCK

	LIVING	LIGHT	LIGHT TECH
"A"	L4470	N4470	NT4470
"B"	L4470/127	N4470/127	—

The illuminated liquid cristal display alarm clock is powered through the power line voltage and has an internal back-up battery that guarantees a life of one month in case of power supply failure. The display shows the time, minutes, day of the week and the symbol of the functioning clock. The sound signal, emitted through an electronic bell, can be disabled by pressing any pushbutton. In any case, it goes off after a minute.

Technical data

- electronic alarm clock with built-in bell
- power supply: "A" 230V a.c. $\pm 10\%$ 50/60Hz - "B" 110/127V a.c. $\pm 10\%$ 50/60Hz
- illuminated display
- charge back-up: 30 days
- indication on the liquid cristal display of: the time, minutes, day of the week and alarm clock activation
- max conductor size: 2.5 mm²

Wiring diagram "A" and "B"

Audible and luminous signalling devices

HEARING REQUEST

LIVING	LIGHT	LIGHT TECH
L4550	N4550	NT4550

The hearing request system allows the user, provided with the Master module, to control the entrance requests in the room in which the user is situated and, at the same time, to send reply messages to the display modules from which the request has been forwarded. The system can also be equipped with additional display modules to inform other people of what is happening.

The LIVING INTERNATIONAL, LIGHT AND LIGHT TECH hearing request system and paging module includes two main elements:

- the module (item L4550 - N4550 - NT4550)
- the power supply unit (item 4930/05 - item 4930/1 - 4930/3 supplied separately)

The system can be completed with a:

- selection pushbutton (item L-N-NT4005)
- remote control (item 392123 for setting up messages).

Depending on how it will be configured, the following functions can be assigned to the module:

- master
- answering system / paging module
- off-door

Technical data

power supply: 9Vd.c.
 max absorbed current: 140 mA (each device)
 operating temperature: 5 ° to 40 °C
 degree of protection: IP30
 preset messages (which can always be changed): 9
 preset languages that can be selected: IT - E - GB - F
 overall size: 3 modules

Terminal connection

- C+** = positive for display modules
- +** = positive for the master module
- = negative (common to all configurations)
- S** = terminal for configuration

Answering system / paging module

- F** = terminal for Off-door configuration

Wiring diagrams for the configuration of modules

The installation is carried out with two wires only. When wiring, a simple "CONFIGURATION" can assign one of the following functions to the module:

- master station (Fig. 1)
- off-door external station (Fig. 2)
- answering system / paging module external station (Fig.3)

Fig.1: master station

Fig.2: off-door external station

Fig.3: answering system / paging module external station

ELECTRONIC BELL

LIVING	LIGHT	LIGHT TECH
L4355/12	N4355/12	NT4355/12

The electronic bell has 3 sounds, all of which are continuous and intermittent and pilot-operated from three different paging locations.

It is also possible to adjust the volume of the required sound with the controller located at the front.

The 12V power supply can be used with direct current or alternate current.

Technical data

- power supply: 12V d.c./a.c. $\pm 15\%$ 50/60Hz
- absorption:
150mA with pressed pushbutton
15mA at rest

Wiring diagram

PULL-OUT EMERGENCY TORCH

LIVING	LIGHT	LIGHT TECH
L4380	N4380	NT4380

The device includes a charger base and a lamp with replaceable back-up batteries. It turns on automatically when the electrical power goes out. The "lamp" unit can be removed so that it can be used as a normal rechargeable torch.

It also includes two LEDs which indicate the type of function being used and a slide switch for enabling or disabling the device thereof (this is important for preventing it from being switched on in case of an intentional disconnection of the power service).

The battery recharge is also temporarily inactive when the device is disabled (red LED ON). It is possible to exclude the removal of the lamp unit by putting in a special lock screw located at the bottom of the device.

Technical data

- pull-out emergency torch with automatic switch-on device
- charger base with safety connector equipped with a screen
- lighting source: white-lighted LED
- rechargeable battery: type Ni-MH without "memory" effect, interchangeable
- life: 2 hours
- stand-by consumption: 0,4W
- power supply: 230/127V a.c. $\pm 10\%$ 50/60 Hz - 110V a.c. $\pm 10\%$ 60 Hz
- max conductor size: 2.5mm²
- overall size: 2 modules

Wiring diagram

L4784/...	L4784/...	L4784/...
L4786/...	L4786/...	L4786/...

Emergency and lighting

The new high-efficiency luminous and long-lasting emergency lamps are available in two versions: version with the one-function emergency lamp or the lamp with permanent emergency and lighting. The first ones start operating automatically in case of a power supply failure, then they turn off again when the power is back; the second ones use the emergency function together with the permanent switch-on to light up rooms that need artificial lighting 24 hours a day, for example corridors or internal stairways without windows.

Control functions

Every lamp is supplied with a LED, which indicates that there is a flow of electricity, and a pushbutton that lets you turn it off when used for emergencies in order to prevent the batteries from uselessly running down, for example when you intentionally turn off the main switch to carry out electrical maintenance on the system. When there are several lamps, it is possible to exclude them with a remote switch.

Spare batteries

The lamps are supplied with batteries placed in the back, easily accessible for their replacement. In fact, the batteries can be supplied separately as spare parts.

Wiring diagram

Wiring diagram for disabling the operation of the emergency lamp

Automatic thermal magnetic circuit breaker (1 module) device "A"

Two-pole version with one protected pole. Extends the possibility to use these automatic devices with single-phase circuits, for which there should be a two-pole break.

Tripping features

Tripping feature of circuit breakers recorded with cold start to room temperature $T_a = 20^\circ\text{C}$
 I = actual current
 I_n = rated current of the switch
 A red/green flag shows the position of the contacts (closed or open).

"Salvavita" automatic earth leakage thermal magnetic circuit breaker (2 mod.) device "B"

The device has an electronic earth-leakage release which is self-powered through a built-in rectifier. It gives additional protection against direct contact with parts connected to the power supply. This electronic solution enables the device to detect earth-fault leakage current with continuous components (earth leakage - type A ) and reduce accidental trips due to line disturbances. A red/green flag shows the position of the contacts (closed or open). In a system sized according to the IEC Standards, a correct installation requires a "Salvavita" upstream of an automatic earth leakage thermal magnetic circuit breaker with $I_{\Delta n} = 30\text{mA}$.

Technical features

- rated current: 6-10-16A
- rated voltage: 230V a.c. 50Hz
- rear terminals
- max conductor size: 4mm²
- overcurrent protection on phase
- breaking capacity: I_n 6A: 1500A 230V a.c.
 I_n 10-16A: 3000A 230V a.c.
- tripping features - type C
- differential breaking capacity - device "B": 500A
- differential rated current - device "B": 10 mA
- maximum specific pass-through energy I^2t (A²s):

breaking capacity	I_n 6A	10A	16A
1500A	7500	11000	13000
3000A		28000	30000

Wiring diagram - device "B"

The principle of the above diagram goes for devices "A", too.

FUSECARRIERS

LIVING	LIGHT	LIGHT TECH
L4231	N4231	NT4231

Features of fuses installed

Item fusecarrier	Type of fuse	Size of fuse	Voltage rating	Rated current	Coupling	Max. conductor size to terminals
L/N/NT4231	miniature glass body	5x20 mm 6.3x32 mm	250V a.c.	max 10A	bayonet	4 mm ²

Electrical safety devices

INTERLOCKED SOCKETS

LIVING	LIGHT	LIGHT TECH
L4311/10	N4311/10	NT4311/10
L4311/16	N4311/16	NT4311/16

Interlocked sockets – 2 modules

2P+E two-pole thermal magnetic circuit breaker with one protected pole and interlocked socket.

These assemblies include the following:

- a) protection of one pole (phase) and opening of the neutral
- b) “open” switch socket with socket contacts totally separated from the electric power supply mains (double-pole break) socket/switch interlock.

A special mechanism prevents closing the switch (supplying the socket) if the plug has not been previously plugged in. It can also prevent pulling out the “charged” plug (with user’s device electrically-powered). As a matter of fact, in this case, the extraction attempt (with switch closed) will immediately open the switch thereof (plug still connected to the socket contacts).

Technical features

- rated current: 10-16A
- rated voltage: 230V a.c.
- max conductor size: 2.5mm²
- breaking capacity: 3000A 230V a.c.
- degree of protection: shielded socket contacts 2.1

GAS DETECTORS

LIVING	LIGHT	LIGHT TECH
L4611/12	N4611/12	NT4611/12
L4612/12	N4612/12	NT4612/12
L4520	N4520	NT4520

The range of gas detectors includes:

- methane gas detectors
- GPL gas detectors

Methane and GPL gas detectors comply with standard UNI CEI 70028 and with the European standard project EN 50194.

All detectors use the latest-generation semiconductor sensors; this feature makes every device extremely selective on the gas for which it was rated, thus the possibilities of accidental alarms are reduced. They are controlled by a microprocessor and are provided with an internal self-test for signalling possible anomalies of electronic components of the sensor and of external connections. A series of LEDs and a audible signalling device indicate proper power supply, a possible anomaly or an alarm situation. As required by the Standards, all devices are sensitive to just one type of gas and clearly show the name of the manufacturer, the type of gas for which they were made, the recommended replacement date, the guaranteed period of operation, etc.. All devices are made in a two-module enclosure.

Only the configuration that requires an installation combined with the repeater and detector is covered by the IMQ - UNI - CIG mark of conformity, according to the Standard UNI CEI 70028.

Technical features

- power supply: 12V a.c./d.c. ± 10%
- absorbed power: max 2W
- operating temperature: 5 to 40°C
- loudness level of the alarm signal: 85dB a 1m
- operative sensitivity: 10% of the gas explosion level, lower limit

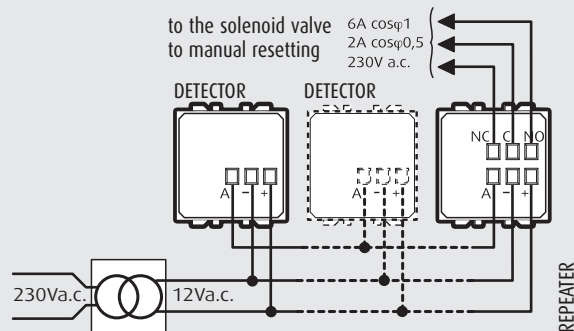

Alarm indications and proper operation

The alarm, failure and proper power supply indication is signalled by the LEDs and by the audible signalling devices which bear the standard symbols required by the regulation.

Wiring diagrams

Connection to a gas detector and a signal repeater.

For systems with 3 devices, use transformer item F91/12E

Connection to a gas detector, a signal repeater and solenoid valve.

IP40 and IP55 enclosures

IP40 ENCLOSURES

These boxes consist of a base and of a cover in which (if required) pre-connected snaplock devices can be fitted from the back side. This set of products is suitable for uses in tough and environmentally difficult places such as roofs, storehouses, basements, etc. Thanks to their excellent features (resistance to high temperatures and fire), these boxes are suitable for electric systems installed in high-risk places (e.g. in case of fire), as required by the Standards IEC 64-8 section 7. Therefore, they can be used in buildings built with inflammable material (e.g. wood) or in places containing highly inflammable material (thermal power stations, lumberyards).

IP55 ENCLOSURES

These boxes have a snap-lock front door with an elastic sheath. The IP55 degree of protection is guaranteed by a watertight seal and by a special snaplock fastening system. These products are generally used in particular places such as: wet and moist places, places exposed to adverse weather or water jets (for example in a car-wash).

They can be used for installing electric systems in places with class 3 explosion hazards (AD-FT systems in compliance with Standard IEC 64-2) since its base and front door are made of self-extinguishing resin with high resistance to fire and high temperatures.

Choosing enclosures according to their use

Environments		Minimum required IP degree
Household	Basements	IP40
	Attics	
	Indoor garages	
Household	Bathrooms or shower rooms	IP44
	Boiler room	
	Outdoor garages	
Household	Swimming pools	IP55
	Store houses	
Service industry	Shopping centers	IP40
	Stores	
	Classrooms	
	Libraries	
	Museums	
	Offices	
Service industry	Healthcare facility	IP44
	Anaesthesia and surgery rooms	
Service industry	Laundries	IP55
	Places with explosion hazards (class 2E)	

Technical features of enclosures IP40 and IP55

- Material of boxes IP40: ABS (base and cover)
- Material of boxes IP55: ABS (base), polycarbonate (cover chassis) and PVC (pliable sheath)
- Temperature range: -5 to +40°C
- Resistance to abnormal heat and fire up to 652°C
- IMQ approval according to Standard CEI 23-48 (IEC670)

NOTE: The IP55 degree of protection of the protected covers for boxes item 502 and item 503E is obtained when the cover is closed and when the item is installed on smooth, grooveless and waterproof walls (smooth tiles, marble).

Electronic devices in protected version

SWITCHES ITEM, 25550/180 AND ITEM 25550/270

Coverage range diagram item 25550/180

Coverage range diagram item 25550/180

Technical features

- Degree of protection: IP54
- Supply voltage: 230V a.c. 50Hz
- Controllable power:
 - 1000VA (fluorescent lamps)
 - 2000VA (transformers and quartz-iodine lamps)
 - 2000W (resistive loads)
- Closing time of contact:
 - Adjustable from 12 seconds to 16 minutes
- Twilight threshold:
 - adjustable from 10 to 4000 lux
- Detection:
 - high density detection with Fresnel lens optical system
- Sensor: positioned in pivoting ball head
- Horizontal spectrum:
 - 180°/16m (art. 25550/180)
 - 270°/16m (art. 25550/270)
- Minimum installation height: 1.7m
